## STA Rigistrasse, Inwil

The aim of this four high-rise project is to create a new level of generosity, unity and enjoyment for the Hinwil residents, with a focus on an ecological approach through landscape and mobility.

The area around the three high-rise buildings, above The landscape offers differentiated common areas the car park roofs, is made from a mixture of grafor the quarter. On the side the Rigiplatz connects to the village center, the central Lindenplatz, and the vel and water-bound ceiling and placed on a sandy open park along the Reinbach. The topography is sub-floor covered with very low maintenance-free office days. designed to collect all the rainwater from the quarter plantings.

## in the garden, and staging this through a sequence of channels and stepped ponds as far as the stream. Depending on the weather, the northern part of the Allmend will suddenly change to the floodplain.

The project is a role model for mobility in Baar. A diverse mobility offer ensures public transport options, ample parking places, with a heavy emphasis on velo parking, velo repair stations and e-car sharing stations. e-mobility (e-bike, e-scooter and e-car) is created with the appropriate charging infrastructure. Drop-off areas for goods handling, co working spaces on the ground floor allow residents home
